PROFESSIONAL SUMMARY

AI-native Frontend Engineer with **3+ years** of experience shipping production-grade web applications across **Fintech, FSM, EdTech, and Gaming** domains. Proficient in **React.js, Next.js, TypeScript, Redux, and Tailwind CSS** with working knowledge of CI/CD, Docker, and AWS. Leverage **AI-assisted development workflows** (GitHub Copilot, Claude, ChatGPT, v0) to accelerate feature delivery by ~40%, write cleaner code, and debug complex issues faster. Strong in **prompt engineering for code generation**, API integration, performance optimization, unit testing (Jest), and building scalable low-code configuration systems. Experienced with **JWT, Google OAuth 2.0**, and Agile/Scrum delivery.

TECHNICAL SKILLS

Frontend: React.js, Next.js, Redux, JavaScript (ES6+), TypeScript, HTML5, CSS3, Tailwind CSS, Responsive Web Design, Web Vitals, Performance Optimization

Backend & APIs: Node.js, RESTful APIs, MVC Architecture, Axios, Jest (Unit Testing)

DevOps / Tools: Git, GitHub, GitLab, Agile/Scrum, CI/CD Pipelines; familiar with Docker, Jenkins, AWS (EC2, S3)

Auth & Integrations: JWT Authentication, Google OAuth 2.0, Cashfree Payment Gateway, Slack Automation

AI & Productivity Tools: GitHub Copilot, Claude AI, ChatGPT, v0 by Vercel, Cursor IDE, Prompt Engineering, AI-assisted Code Review & Debugging

WORK EXPERIENCE

Zinier Technologies Pvt Ltd — Software Engineer (SDE-1), Hybrid September 2025 – Present

- Engineered **dynamic, JSON-driven UI components** in React.js for Zinier Studio's low-code FSM platform, enabling multi-client workflow configuration without custom code — deployed across **5+ enterprise clients**.
- Diagnosed and resolved a critical **mobile-vs-web UI rendering mismatch** caused by missing null guards in `jslib` visibility functions and absent `webBuilderConfig` — restoring correct panel behavior for enterprise clients.
- Built a **completeTaskFromDispatched** side panel end-to-end: `actionOnLoad` fetch chains, conditional visibility logic, save/submit button flows, and `fireProcessEventUpsertTask` event binding.
- Fixed **query node JOIN chain failures** in Studio's data layer by mapping a complete `links` object (`workOrderTask` and `workOrderType` to `workOrder`), resolving execution errors that blocked field operators.
- Leveraged AI tools** (Claude, Copilot) to accelerate configuration debugging and component scaffolding, reducing average feature turnaround by ~35%.

Openturf Technologies Pvt Ltd — Software Engineer, Remote January 2025 – August 2025

- Built core **Fintech platform modules** — BizOps, Treasury, and Liquidity dashboards — using React.js and Tailwind CSS, serving operations teams processing **high-volume financial transactions** across multiple business units.
- Implemented **role-based access control UI** with JWT authentication and Node.js API integration, enabling secure, audit-logged workflows across 3+ user roles.
- Refactored **route-level code splitting and lazy loading** across the BizOps module, improving initial load time by ~30% and eliminating redundant API calls on component mount.
- Used **AI-assisted development (ChatGPT, Copilot)** for rapid API schema interpretation, boilerplate generation, and code review — cutting development cycle time by ~40% on new module builds.

Freelance Frontend Developer (*client projects during career transition*), Remote May 2024 – December 2024

- Built and shipped two client products: a **React.js + Redux** gamification dashboard with real-time reward

mechanics for TGC Technologies ([Link](#)) and an **SEO-optimized Next.js** e-learning platform with Cashfree payment integration for Seoak (www.seoak.in).

- Used **AI prompting (v0, ChatGPT)** to scaffold UI components and responsive layouts, cutting design-to-code time by ~50% across both engagements.

Brigosha Technologies Pvt Ltd — Junior Software Engineer, Bangalore

August 2022 – April 2024

- Delivered **15+ responsive, cross-device React.js components** across mobile and desktop, validated on Chrome, Safari, and Firefox for consistent rendering.
- Integrated **RESTful APIs** for real-time data fetching powering interactive dashboards, dynamic forms, and live data visualization across 3 product modules.
- Collaborated with backend and QA teams in **Agile sprints** to deliver secure, maintainable web modules; contributed to code reviews and sprint retrospectives.
- Adopted **AI-assisted debugging workflows early**, using ChatGPT for error analysis and solution drafting — reducing average bug resolution time across the team.

EDUCATION

MVJ College of Engineering, VTU — BE in Computer Science

Aug 2018 – July 2022

PROJECTS

Task Management Application — [GitHub Repository](#)

- Full-stack task manager using **React.js, Node.js, Express, and MongoDB** with **Google OAuth 2.0** and JWT-based route protection, serving end-to-end CRUD operations via MVC architecture.
- Built a responsive dashboard with Axios-driven API calls; used **AI tools for architecture planning and API schema design**, reducing project setup time significantly.

Slack Automation for GitLab

- Built an automated **Slack bot** to trigger real-time notifications on GitLab push, merge, and deployment events for a team of 8 engineers.
- Eliminated manual status check-ins and reduced QA-to-developer feedback lag from hours to minutes, improving overall deployment visibility.

AI-NATIVE DEVELOPMENT

- **Prompt Engineering:** Skilled in writing structured, context-rich prompts for code generation, debugging, architecture review, and refactoring using Claude, ChatGPT, and Copilot.
- **AI-Accelerated Delivery:** Integrated AI tooling into daily workflow — from scaffolding components with v0 and Cursor to using LLMs for complex bug root-cause analysis — consistently reducing individual feature delivery time by ~35–50%.
- **AI Code Review:** Used AI assistants to identify edge cases, improve test coverage rationale, and enforce consistent code style across PRs — improving code quality without additional reviewer overhead.
- **Tooling:** GitHub Copilot, Claude AI (Anthropic), ChatGPT (OpenAI), v0 by Vercel, Cursor IDE.
